Several native trees are readily available in the nursery trade and are already widely used by landscape professionals. Below is a list of native trees, some of which are readily available, and others which may be harder to find. All of the plants on this list are native to Connecticut, however this is not a complete list of all Connecticut native trees. This list contains proven landscape performers as well as species which have landscape potential. For more information contact Jessica.Lubell@uconn.edu
